                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to hedgehog fusion proteins. Hedgehog CC proteins are a family of extracellular signalling proteins that regulate CC various aspects of embryonic development both in vertebrates and in CC invertebrates. Hedgehog fusion protein is useful for the prophylaxis or CC treatment of any condition or disease states for which a hedgehog or CC patched protein constituent is efficacious and in the diagnosis of CC constituents or conditions of disease states in biological system or CC specimens and for diagnostic purposes in non-physiological systems. CC Hedgehog fusion protein is useful for treating neurological conditions CC due to injury, aging of nervous system, including Alzheimer's disease, CC chronic neurodegenerative diseases of the nervous system, including Parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis CC and chronic immunological diseases of nervous system including multiple CC sclerosis and malignant gliomas, medulloblastomas, neuroectodermal CC tumours and to specifically target medical therapies against cancers and to summar which express the receptor for the protein. The present sequence cis human oligoniclectide HGG-808 used to construct pMMC22, pMMC23, pMMC25 and namera can in the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

Hedgehog fusion protein is useful for the prophylaxis or treatment of any condition or disease state for which a hedgehog or patched protein constituent is efficacious and in the diagnosis of constituents or conditions of disease states in biological system or specimens and for diagnostic purposes in non-physiological systems. Hedgehog fusion protein is useful for treating neurological conditions due to injury, aging of nervous system, including Alzheimer's disease, chronic neurodegenerative diseases of the nervous system, including parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sclerosis and malignant gliomas, medulloblastomas, neuroectodermal tumours and to specifically target medical therapies against cancers and tumours which express the receptor for the protein. The present sequence is human oligonucleotide HOG-797 used to construct pMMC23 plasmid which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to hedgehog fusion proteins. Hedgehog proteins are a family of extracellular signalling proteins that regulate various aspects of embryonic development both in vertebrates and in invertebrates. Hedgehog fusion protein is useful for the prophylaxis or treatment of any condition or disease state for which a hedgehog or patched protein constituent is efficacious and in the diagnosis of constituents or conditions of disease states in biological system or specimens and for diagnostic purposes in non-physiological systems. Hedgehog fusion protein is useful for treating neurological conditions due to injury, aging of nervous system, including Alzheimer's disease, chronic neurodegenerative diseases of the nervous system, including multiple parkinson's disease, Huntington's chorea, amylotropic lateral sclerosis and chronic immunological diseases of nervous system including multiple solerosis and maliconent allowse medicallohasetoms neuro-or-ordermal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     a hedgehog fusion protein. The invention also relates to methods of defining and mapping functionally important regions of a protein by commodifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of craimantory and autoimmune diseases, and cancers. In particular, they can be used to prevent preventing or ameliorate neurodegenerative conjugates with the management of disease; age-associated neurological disease, Alzheimer's cidisease; age-associated neurological disease; neurological injury and conference and malignant gliomas, medulloblastomas and concertodermal tumours. The modifications made to the hedgehog protein compared ability to stay in the vasculature for longer periods of the invention to cross the blood-brain barrier, and an improved thermal stability would be an advantage when formulating the function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

CC various medical conditions including various neurological disorders, CC inflammatory and autoimmune diseases, and cancers. In particular, they can be used to prevent preventing or ameliorate neurodegenerative CC disorders (e.g., Parkinson's disease, Huntington's disease, Alzheimer's CC disease); age-associated neurological disease; neurological injury and CC trauma; immunological diseases of the nervous system (e.g., multiple CC sclerosis); stroke; and malignant glomas, medulloblastomas and CC neuroectodermal tumours. The modifications made to the hedgehog protein CC may result in increased half-life, altered tissue distribution (such as CC time), increased stability in solution, protection from proteolytic CC degradation, or reduced immunogenicity. In particular, the ability to CC remain in the vasculature for prolonged periods may allow a hedgehog CC protein of the invention to cross the blood-brain barrier, and an original stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a channel scaling and control of the hedgehog moretain in prodection from the presents of the hedgehog protein in powder form.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-terminus, or to lysine residues of the hedgehog protein. The hedgehog protein used in the conjugate may be a wild-type or mutant Sonic hedgehog (Shh), Indian hedgehog (Ihh) or Desert hedgehog (Dhh) protein, or may be a hedgehog fusion protein. The invention also relates to methods of defining and mapping functionally important regions of a protein by modifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of
                                                                          human Sonic hedgehog mutagenic primer used in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel polymer conjugates of hedgehog proteins which have increased bioavailability. The hedgehog proteins are conjugated to a non-naturally-occurring polymer comprising a polyalkylene glycol group, with the proviso that the polymer is not conjugated to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modified hedgehog protein, useful in the treatment of Parkinson's disease and Huntington's chorea, comprises a polymer containing a polyalkylene glycol group linked to any residue other than the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 6; Page 77; 157pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N-terminal and lysine residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2001-049927/06.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel polymer conjugates of hedgehog proteins which have increased bioavailability. The hedgehog proteins are conjugated to a non-naturally-occurring polymer comprising a polyalkylene glycol group, with the proviso that the polymer is not conjugated to the N-terminus, or to lysine residues of the hedgehog protein. The hedgehog protein used in the conjugate may be a wild-type or mutant sonic hedgehog (Shh), Indian hedgehog (Ihh) or Desert hedgehog (Dhh) protein, or may be a hedgehog fusion protein. The invention also relates to methods of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO200073337-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mutagenic primer; ss
                                                                                                                                                                                                                                                                                                                                                                             defining and mapping functionally important regions of a protein by modifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of various medical conditions including various neurological disorders, inflammatory and autoimmune diseases, and cancers. In particular, they may be used to prevent preventing or ameliorate neurodegenerative disorders (e.g., Parkinson's disease, Huntington's disease, Alzheimer's disease); age-associated neurological disease, neurological injury and trauma; immunological diseases of the nervous system (e.g., multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-JUN-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  07-DEC-2000
                                                                                                                                                                                                                  sclerosis); stroke; and malignant gliomas, medulloblastomas and neuroectodermal tumours. The modifications made to the hedgehog protein may result in increased half-life, altered tissue distribution (such as an improved ability to stay in the vasculature for longer periods of time), increased stability in solution, protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to remain in the vasculature for prologed periods may allow a hedgehog remain in the vasculature for prologed periods may allow a hedgehog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modified hedgehog protein, useful in the treatment of Parkinson's disease and Huntington's chorea, comprises a polymer containing a polyalkylene glycol group linked to any residue other than the N-terminal and lysine residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  26-MAY-2000; 2000WO-US14741.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 6; Page 77; 157pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (BIOJ ) BIOGEN INC
                                                              Sequence 38
                                                                                                                              increased thermal stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a human Sonic hedgehog mutagenic primer used in an exemplification of the

RESULT 17
             cc conjugated to a non-naturally-occurring polymer comprising a polyalkylene conjugated to a non-naturally-occurring polymer comprising a polyalkylene cc glycol group, with the proviso that the polymer is not conjugated to the cc glycol group, with the proviso that the polymer is not conjugated to the cc glycol group, with the proviso that the polymer is not conjugated to the cc glycol group, with the proviso that the polymer is not conjugated to the cc group of the conjugate may be a wild-type or mutant sonic hedgehog condition, indian hedgehog (lih) or Desert hedgehog (Dhh) protein, or may be conditioning and mapping functionally important regions of a protein by cc defining and mapping functionally important regions of a protein by cc modifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the cromparty of the protein. The hedgehog polymer conjugates may be used in the management of cc inflammatory and autoimmune diseases, and cancers. In particular, they are used to prevent preventing or ameliorate neurological disease, Alzheimer's cdisease); age-associated neurological disease; neurological injury and concerns immunological diseases, Huntington's disease, Alzheimer's conjugates may result in increased half-life, altered tissue distribution (such as an improved ability to stay in the vasculature for longer periods of time), increased stability in solution, protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to capture in the vasculature for protonged periods may allow a hedgehog protein of the invention to cross the blood-brain barrier, and an increased thermal stability would be an advantage when formulating the increased thermal stability would be an advantage when formulating the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
conjugated to a non-naturally-occurring polymer comprising a polyalkylene glycol group, with the proviso that the polymer is not conjugated to the N-terminus, or to lysine residues of the hedgehog protein. The hedgehog protein used in the conjugate may be a wild-type or mutant Sonic hedgehog (Shh), Indian hedgehog (Ihh) or Desert hedgehog (Phh) protein, or may be a hedgehog fusion protein. The invention also relates to methods of defining and mapping functionally important regions of a protein by modifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of inflammatory and autoimmune diseases, and cancers. In particular, they may be used to prevent preventing or ameliorate neurodegenerative disorders (e.g., Parkinson's disease, Huntington's disease, Alzheimer's
                                                                                                                                                                                                                        The invention relates to novel polymer conjugates of hedgehog proteins which have increased bioavailability. The hedgehog proteins are
                                                                                                                                                                                                                                                                                                      Modified hedgehog protein, useful in the treatment of Parkinson' disease and Huntington's chorea, comprises a polymer containing polyalkylene glycol group linked to any residue other than the N-terminal and lysine residues -
                                                                                                                                                                                                                                                                            Example 6; Page 77; 157pp; English.

The modifications made to the hedgehog protein an improved ability to stay in the vasculature for longer periods of time), increased stability in solution, protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to remain in the vasculature for prolonged periods may allow a hedgehog protein of the invention to cross the blood-brain barrier, and an increased thermal stability would be an advantage when formulating the human Sonic hedgehog mutagenic primer used in an exemplification of the numer to come the present sequence represents a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders (e.g., Parkinson's disease, Huntington's disease, Alzheimer's disease); age-associated neurological disease; neurological injury and trauma; immunological diseases of the nervous system (e.g., multiple sclerosis); stroke; and malignant gliomas, medulloblastomas and neuroectodermal tumours. The modifications made to the hedgehog protein may result in increased half-life, altered tissue distribution (such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-terminus, or to lysine residues of the hedgehog protein. The hedgehog protein used in the conjugate may be a wild-type or mutant Sonic hedgehog (shh), Indian hedgehog (lhh) or Desert hedgehog (Dhh) protein, or may be a hedgehog fusion protein. The invention also relates to methods of defining and mapping functionally important regions of a protein by modifying accessible amino acid side hedgehog, and determining the effect the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           an improved ability to stay in the vasculature for longer periods of time), increased stability in solution, protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to remain in the vasculature for prolonged periods may allow a hedgehog protein of the invention to cross the blood-brain barrier, and an increased thermal stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a the hedgehog protein in powder form. The present sequence represents a the hedgehog protein in powder form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            various medical conditions including various neurological disorders, inflammatory and autoimmune diseases, and cancers. In particular, they may be used to prevent preventing or ameliorate neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 42 BP; 11 A; 11 C; 10 G; 10 T; 0 other;

CC glycol group, with the provisor can be provided to grotein used in the conjugate may be a wild-type or mutant Sonic hedgehog CC (Shh), Indian hedgehog (Ihh) or Desert hedgehog (Dhh) protein, or may be a wild-type or mutant Sonic hedgehog CC defining and mapping functionally important regions of a protein by CC modifying accessible amino acid side chains, and determining the effect CC protein. The hedgehog polymer conjugates may be used in the management of CC various medical conditions including various neurological disorders, in particular, they can be used to prevent preventing or ameliorate neurodegenerative CC disease); age-associated neurological disease; neurological injury and CC disease); at parkinson's disease, Huntington's disease, Alzheimer's CC disease); at manunological diseases of the nervous system (e.g., multiple CC neuroectodermal tumours. The modifications made to the hedgehog protein comay result in increased half-life, altered tissue distribution (such as an improved ability to stay in the vasculature for longer periods of compressed thermal stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a human sonic hedgehog mutagenic primer used in an exemplification of the invention form. The present sequence represents a invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified hedgehog protein, useful in the treatment of Parkinson's disease and Huntington's Chorea, comprises a polymer containing a polyalkylene glycol group linked to any residue other than the N-terminal and lysine residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel polymer conjugates of hedgehog proteins which have increased bioavailability. The hedgehog proteins are conjugated to a non-naturally-occurring polymer comprising a polyalkylene glycol group, with the provise that the polymer comprising the the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 6; Page 77; 157pp; English.

                                                                                                                                                                                                                                                                                                                                   Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disorders (e.g., Parkinson's disease, Huntington's disease, Alzheimer's C disease); age-associated neurological disease; neurological injury and c trauma; immunological diseases of the nervous system (e.g., multiple sclerosis); stroke; and malignant gliomas, medulloblastomas and neuroectodermal tumours. The modifications made to the hedgehog protein may result in increased half-life, altered tissue distribution (such as a improved ability to stay in the vasculature for longer periods of time), increased stability in solution, protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to remain in the vasculature for prolonged periods may allow a hedgehog increased thermal stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a human Sonic hedgehog mutagenic primer used in an exemplification of the

The invention also relates to methods of defining and mapping functionally important regions of a protein by modifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the protein. The hedgehog polymer conjugates may be used in the management of inflammatory and autoimmune diseases, and cancers. In particular, they may be used to prevent preventing or ameliorate neurodegenerative may be used to prevent preventing or ameliorate neurodegenerative.

defining and mapping functionally important regions of a protein by comodifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the comodifying accessible amino acid side chains, and determining the effect the position and/or type of modification have on the activity of the comodification including various neurological disorders (c) various medical conditions including various neurological disorders, inflammatory and autoimmune diseases, and cancers. In particular, they can be used to prevent preventing or ameliorate neurological disorders (c) any be used to prevent preventing or ameliorate neurological injury and disease); age-associated neurological disease; neurological injury and crauma; immunological diseases of the nervous system (e) and untiple consists of the seases of the nervous system (e) and untiple consists of the informal filters and the hedgehog protein as an improved ability to stay in the vasculature for longer periods of time), increased stability in solution, protection from proteolytic degradation, or reduced immunogenicity. In particular, the ability to creased thermal stability would be an advantage when formulating the hedgehog protein in powder form. The present sequence represents a convention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              which have increased bioavailability. The hedgehog proteins are conjugated to a non-naturally-occurring polymer comprising a polyalkylene glycol group, with the proviso that the polymer is not conjugated to the N-terminus, or to lysine residues of the hedgehog protein. The hedgehog protein used in the conjugate may be a wild-type or mutant Sonic hedgehog (Shh), Indian hedgehog (Ihh) or Desert hedgehog (bh) protein, or may be a hedgehog fusion protein. The invention also relates to methods of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modified hedgehog protein, useful in the treatment of Parkinson's disease and Huntington's chorea, comprises a polymer containing a polyalkylene glycol group linked to any residue other than the N-terminal and lysine residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel polymer conjugates of hedgehog proteins which have increased bioavailability. The hedgehog proteins are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 6; Page 77; 157pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2001-049927/06.

                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method for determining the presence of neoplastic molecular markers in a host, involving the use of neoplastic molecular marker specific reagents to detect such markers and analysing the array of reagents, allowing the identification of the neoplastic disease present. This can be used to determine the best treatment for cancers, in particular neural cell, lung and prostate tumours. The present sequence is a PCR primer useful for detecting the coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining the presence of neoplastic molecular markers, by identifying the presence of markers in host test sample using array of neoplastic molecular marker specific reagents and analyzing the array
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO200240716-A2

CC distribution of microsatellites and MboI sites, the frequency of cc (T6)n >9 microsatellites in the bovine genome is estimated at >100, cc (T6)n >9 microsatellites in the bovine genome is estimated at >100, cc (T6)n >9 microsatellites in the bovine genome is estimated at >100, cc (T6)n >9 microsatellites in the bovine such bovine microsatellites cc is summarised in the specification and indexed herein (see below). cc The sequences upstream and downstream of the microsatellite sequence compared to generate the required PCR primers for in vitro amplification of the corresp, microsatellite (using the program compilification of the corresp, microsatellite (using the program compilification). The microsatellites may be used to identify individuals, cf or parentage testing, and in the genetic mapping of economic trait cloci, or genes involved the determinism of economic trait craits esp. in cattle, to allow selective breeding.

                                                            The present invention relates to a recombinant antibody capable of specifically binding to sperm agglutination antigen-1 (SAGA-1). The recombinant antibody has two peptide fragments of the S19 antibody and the fragments are joined together by a linker. The recombinant monoclonal antibodies are useful in a passive immunity composition for contraception as they inhibit the ability of sperm to fertilize an egg. The antibodies may be used e.g. as an active ingredient of a spermistatic agent, or as a component of a

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB

 Total number of hits satisfying chosen parameters:
 Scoring table:
 Title:
Perfect score:
 OM nucleic - nucleic search, using sw model
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 BI772215.1 GI:15763793
 cDNA Library Preparation: Life Technologies, Inc. cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL) DNA Sequencing by: Incyte Genomics, Inc. Clone distribution: MGC clone distribution information can
 (bases 1 to 45)
 Conservative
 (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

 /Clones were mass excised using the Exassist helper phage constructed by the polyar-Tract mRNA isolated by oligo d(T) priming of poly(A). The samples were isolated from mixed stage saponin(0.1%)-lysed p. falciparum 3D7 infected erythrocytes by the acidic guanidinium phenol chloroform method. The poly A+ RNA was isolated by the polyAr-Tract mRNA isolation system (promega, WI) using streptavidin Magnesphere particles. Directional cDNA jibraries were constructed by oligo d(T) priming of poly(A)+ RNA (5mg) into EcoRI and XhoI sites of 1 ZapII vector using the Zap cDNA inserts in the library was between 1.0 and 1.5kb. Clones were mass excised using the Exassist helper phage (Stratagene), the phagemids were preciptated with PEG 8000 and extracted with phenol/chloroform. Phagemid DNA was electroporated into DHIOB cells."

 quality sequence stop: 50
 /note="vector: psport1; Site_1: Sal1; Site_2: Not1; This clone is among a rearrayed set of 15,247 clones from 11 embryo cDNA libraries (including preimplantation stage embryos from unfertilized egg to blastocyst, embryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, ond E12.5 female mesonephros/gonad) and one newborn ovary cDNA library. Average insert size 1.5 kb. All source libraries are cloned unidirectionally with Oligo(dT)-Not primers. References include: (1) Genome-wide expression profiling of mid-gestation placenta and embryo using a 15,000 mouse developmental cDNA microarray, 2000, Proc. Natl. Acad. Sci. U S A, 97: 9127-9132; (2) Large-scale cDNA analysis reveals phased gene expression patterns during preimplantation mouse developments.
 patterns during preimplantation mouse develolpment, 2000, Development, 127: 1737-1749; (3) Genome-wide mapping of unselected transcripts from extraembryonic tissue of 7.5-day mouse embryos reveals enrichment in the t-complex
